ASSIGNMENT NO 3

1. Open the terminal in your Linux system.

2. Navigate to a directory containing a file you would like to view.

3. Use the "cat" command to view the contents of the file. The syntax for the "cat" command is as follows: cat [options] filename

4. Try out the following examples and write down the commands you used to view each file:

echo -e "Line one\nLine two\nLine three" > my_file.txt

echo -e "First line\nSecond line\n\nThird line after a blank" > my_other_file.txt

echo -e "This is the third file contents." > my_third_file.txt

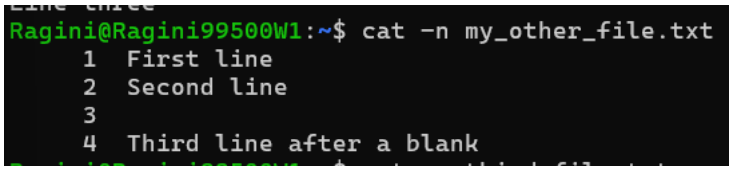

a. View the contents of a file named "my_file.txt".

cat my_file.txt

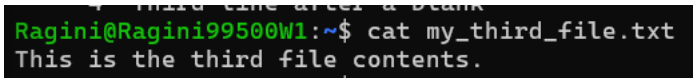

b. View the contents of a file named "my_other_file.txt" and number the lines.

cat -n my_other_file.txt

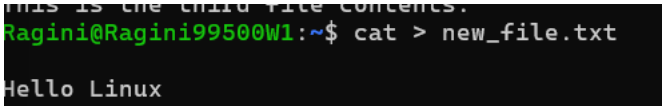

c. View the contents of a file named "my_third_file.txt" .

cat my_third_file.txt

5. Create a new file and use the "cat" command to add content to it.

cat > new_file.txt

6. Try out some of the additional options for the "cat" command (e.g., -n, -b, -s)

cat -b my_other_file.txt

cat -s my_other_file.txt

cat -n my_other_file.txt
